

Date: 9 September, 2025

TriWizard Tech Tournament (Tech Event)

Event Name: TriWizard Tech Tournament – Tech event

Event Date: 2nd and 4th September 2025

Event Time: 4 – 6 pm

Venue: Programming Lab and GRD Lab on 2nd September, 3AI Lab on 4th September

Number of Participants: 130 for first round, 90 for second round

Event Convenors:

1. Saravana Kumarr M (23Z260)
2. Neelesh V (23Z350)

Event Description:

TriWizard Tech Tournament is a technical competitive event organised for 2nd and 3rd year CSE and AIML students. About 130 participants attended the 1st round of the event conducted in the first week of September.

The event was a Harry Potter themed event. Drawing inspiration from the wizarding world, the event aimed to combine creativity and technical skills, offering the participants an engaging mix of design and problem-solving challenges.

The first round was a design challenge, where teams were tasked with creating a Daily Prophet themed newspaper-website using HTML, CSS and Javascript. Participants were able to channel their imagination adhering to judging criteria such as layout, theme, visual appeal, creativity, and dynamic elements. The submissions brought out a mix of wit, design flair, and technical craft. After much deliberation, the teams were assigned scores by judges and 90 participants advanced to the 2nd round.

The second round shifted the stage from assessing the creativity of participants to their technical problem solving, with a debugging contest themed around

Horcruxes. The 2nd round was conducted on a platform designed for the event by the technical team of Github Campus Club. The platform boasted various features such as an integrated code editor, a leaderboard, and rules section. The layout of the platform was inspired by the Harry Potter series. The questions were displayed on a map, where participants can click on different locations representing the 7 questions assigned to each house. The leaderboard was updating live as the event was being conducted.

For the 2nd round, the teams were sorted into four houses. Points were awarded not only for the amount of test cases that were passed but also for how quick the teams were able to come up with the solutions, testing not just their problem solving skills but their efficiency as well.

The event encouraged students on multiple fronts: encouraging students to express their creativity through design, challenged them to demonstrate their problem identifying and solving skills in a time constrained environment, and fostered a sense of community and teamwork.
